1. Quickstart Guide 1.1 Overview

The Remedy RTOS Viewer is integrated into the Remedy IDE and provides updated information on operating system objects

and system state information at each breakpoint. This includes information on the following objects:

- Threads
- Semaphores
- Mutexes
- Message queues
- Messages
- Condition variables
- Barriers
- Rendezvous states
- Timers and timeouts
- Servers
- Environment variables

Remedy RTOS Viewer is seamlessly integrated into the Remedy IDE, appearing as a plug-in for the various environments as shown below for Eclipse and for IAR.

1.2 Installing Plug-in

Plug-in folder "RemedyRtosViewer" should be placed to IAR installation folder \$TOOLKIT_DIR\$\plugins\rtos\

Follow to the next chapter for IDE configuring.

Remedy RTOS Viewer for IAR IDE Quickstart Guide

1.3 Configuring IAR

To set up Remedy RTOS Viewer for IAR the following steps must be completed:

- Start IAR IDE and open Unison RTOS demo project.
- Modify demo project options. Enable "Remedy RTOS Viewer" plug-in, under Options->Debugger->Plugins
